

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

UNITED STATES.

CURRENT STATE SUMMARIES.

Telegraphic Reports for Week Ended Nov. 22, 1919.

These reports are preliminary, and the figures are subject to change when later returns are received by the State health officers.

RABIES IN ANIMALS.**Detroit, Mich., and Kansas City, Mo.**

During the week ended November 8, 1919, one case of rabies in animals was reported at Detroit, Mich., and three cases were reported at Kansas City, Mo.

SCARLET FEVER.

See Telegraphic weekly reports from States, page 2717; Monthly summaries by States, page 2723; and Weekly reports from cities, page 2735.

SMALLPOX.**Petersburg, Alaska—October, 1919.**

During the month of October, 1919, three cases of smallpox were reported at Petersburg, Alaska.

SMALLPOX—Continued.

Prevalence in the United States, June to September, 1919.

The following table shows the number of reported cases of smallpox in States for which data are available for the four months June to September, 1919, compared with the average number of cases reported for the same months during recent years. Where information was available, the averages were computed for the five years 1914 to 1918, inclusive. For many States data were not accessible for the full five years, and the averages were computed for a less number of years, as shown by the footnotes. In all cases the averages are for years later than 1913.

The figures indicate a general increase in the number of reported cases of smallpox in the United States during these months of 1919 as compared with the average of preceding years, the increase being more than 50 per cent of the average.

Smallpox in the United States, June to September, 1919, compared with the average for the same months of preceding years 1914 to 1918, inclusive.
